Verification record

Time Release Safes

TRS-3RFD-876Q-35FC

Status	**Sealed chain verified · 1 segment**
Received by server	**2026-11-06 19:51:36 UTC**
Device clock reported capture at	**2026-11-06 19:51:34 UTC**
Clock difference reported by the device at upload	**1 second (device behind)**
Interval from device-reported capture to receipt	**2 seconds**
Type	**Photo (one sealed segment)**
Device (reported)	**iPhone**
Location	**33.83762, -84.38037 (±16 m) · matches the signed record**
Location source	**Location source not reported**
App	**Time Release Safes 1.0.2**
Device signature	**Device-signed**
Shutter seal	**Seal signature matches the stored bytes; the signing key is not yet registered to a device**
App & device	**Genuine app (Apple) · hardware-sealed**
Scene	**Not checked for a photographed screen — TRS did not check this photo for a photographed screen.**
Public time anchor	**2026-11-06 · timestamped**
Media	**Viewable in the app with this ID**
Custody	**Original holder only**

A Verification ID identifies one record and shows what Time Release Safes established about it: when the recording was made, sealed and received; what the device reported about itself; whether the app could be confirmed genuine; and whether the sealed chain is unchanged. Each is stated on the record, including where it could not be established. It attests the capture and never the content: Time Release Safes cannot see what a recording shows and makes no claim about it, and nothing on this page is a statement that what the recording depicts is genuine. It does not, by itself, prove that any particular file someone shows you is that recording. The media can only be matched to this record inside the Time Release Safes app, and only after the owner or custodian has chosen to make it viewable. Until then, Time Release Safes makes no claim about any file presented by any person or party.

Issued 2026-11-06 19:51:36 UTC · This page is a statement about a recording. It does not, by itself, prove
(for example when the nightly public time anchor is added). Time Release Safes never holds the recording's content key.
